

Hydromadidus

Hydromadidus

Hydromadidus

K.V.Rollers Ltd new *Hydromadidus* compound range.

1. *Definition of hydrophilic* ∴ Meaning, "water loving"..
Substances that have an affinity for water..
2. *hydro-*. prefix. *Definition*:. 1. water, liquid, moisture..
3. *madidus-*. *Definition*:.wet, moist,soaked,steeped..

The K.V.Rollers Ltd *Hydromadidus* compound range is used in various low/non-alcohol damping environments where hydrophilic surface wetting characteristics are considered paramount.

These roller coatings have been specifically designed to wet out and operate with optimum efficiency in low/non-alcohol damping applications. Allowing printers to eliminate alcohol, reduce costs, and bring down VOC levels, improve environmental conditions etc. whilst still maintaining a superlative standard of print quality.

So far we have trialled the materials at various alcohol levels in the following manufacturers printing presses with exemplary results.

Heidelberg

Komori

Roland

And the list is growing all the time!

If you require more specific information then please contact our UK Sales Manager John Lewis

either by email - john.kvrollers@tiscali.co.uk
